

HOW TO PACKAGE YOUR ALTERNATOR FOR SHIPPING

We highly recommend using two boxes to ship your alternator safely.
A small box around 7L x 7W x 7H and a larger box around 12L x 12W x 12H

Start with the smaller box, 7x7x7, and wrap your alternator in packing paper, OR you can use old shirts or towels. Anything to help protect the alternator from damage during shipping and prevent things from getting into the alternator housing and mechanical elements...

Now place the alternator into the small box, then close and tape the top and the bottom of the box securely

Now put peanuts, or some type of packaging protecting into the large box and place the small box with the alternator into the larger box. Close and tape top and bottom of the box securely

****If you do not want to use TWO boxes that is fine. PLEASE make sure that you wrap your alternator very well in something to protect it from the shipping process. Damage from shipping is not Iraggi Alternator responsibility, so we also highly recommend getting insurance, and signature required delivery****
